

Mobile Meet

Easily schedule
S4B meetings
with mobile phones

With the smartphone app "Damovo Mobile Meet" you can schedule Skype for Business Meetings easily and quickly from your mobile phone.

The features are exactly the same as those you are used to as a Skype for Business desktop user, such as setting the date, time, length of the meeting, and meeting title.

By integrating the app into your company's Active Directory, all of your company's employees can be added as participants in a conference.

A created meeting is also automatically saved to your Outlook calendar and contains a direct link to your scheduled session.

Advantages for you

- Create ad hoc Skype4Business Outlook meetings with your iPhone or Android smartphone
- Define basic meeting properties: date, time, length, title, etc.
- Connect from your PC or mobile device (Skype4B client must be installed)
- Use contact lists from Skype, Outlook and your mobile phone's address book
- Quickly and conveniently add participants from your "last 5 contacts" list
