

Easy PnP+

Simple device configuration
through plug and play

Part of
Damovo's
Automated Network Services

Damovo's Easy PnP+ application is a simple and scalable solution for the creation of device configurations.

Easy PnP+ is an extension of the Cisco APIC-EM „Plug and Play“ functionality, which does not actually offer the possibility to create configurations for individual devices or groups.

With Easy PnP+ implementations and mass roll-outs are carried out automatically (if APIC-EM is used). Configurations are retrieved quickly and easily in the event of a new installation or failure of one or more devices.

Simple

- Zero touch deployment for sites & campus locations (when used in combination with APIC-EM)
- Dynamic configuration using simple configuration templates with user-defined variables

Safe

- Secure device authentication
- SSL-based transmission for firmware images and configurations

Inexpensive

- Enterprise-wide end-to-end solution for roll-outs of switches, routers and access points
- No expert knowledge for the configuration and commissioning of devices to the locations required
